SAIS IGCSE GEOGRAPHY 0460

Theme 1.7 — Urbanisation

Revision Pack A6 | Examination 2026

Cambridge Syllabus Objectives — What you MUST be able to do:

1. **Identify and explain** reasons for rapid urban growth (push/pull factors; natural increase)
2. **Describe** the characteristics and problems of squatter settlements in a developing country
3. **Explain** the solutions used to manage squatter settlements (site & service; self-help)
4. **Describe** the effects of urban sprawl on the rural-urban fringe
5. **Explain** the environmental, social and economic impacts of urban sprawl
6. **Evaluate** management strategies for controlling urban sprawl (green belts, brownfield, TOD)

Case Studies Required: Lagos/Makoko (developing) | Atlanta & Lisbon (developed)

IDENTIFY	DESCRIBE	EXPLAIN	EVALUATE
Name / state — no explanation needed	What does it look like? Give characteristics	Give reasons / causes / consequences — use 'because'	Weigh up effectiveness; give both sides; conclude

1. Key Definitions

Learn these definitions precisely — Cambridge often awards 1 mark for a correct definition.

Term	Definition
Urbanisation	The increase in the **proportion** of people living in urban areas — NOT just the total number.
Rural-to-urban migration	The movement of people from the countryside to cities, driven by push factors (poverty, lack of jobs) and pull factors (employment, services, higher wages).
Natural increase	When the birth rate exceeds the death rate in a city, causing population to grow even without migration.
Squatter settlement	An area of poor-quality housing built illegally on land the residents do not own, lacking basic services such as clean water, sanitation and electricity. Also called a shanty town, favela or barriada.
Urban sprawl	The unplanned, low-density outward expansion of a city into the surrounding rural-urban fringe, consuming farmland, habitats and green space.
Rural-urban fringe	The zone on the edge of a city where urban and rural land uses mix — farmland, housing estates, retail parks and business parks compete for space.
Greenfield site	Land that has **never** been built on before — typically farmland or countryside. Preferred by developers (cheaper, easier to build) but controversial as it is lost forever.
Brownfield site	Land that has **previously** been built on and is now derelict or underused (e.g. old factories, docklands). Redeveloping brownfield sites reduces urban sprawl.
Site and service scheme	A government programme that provides residents with a plot of land (site) connected to water, roads and electricity, plus a low-interest loan so they can build or improve their own home.
Self-help scheme	Providing residents with materials, training and loans so they can gradually upgrade their own squatter settlement homes — cheaper than demolition and preserves community ties.
Green belt	A legally protected ring of countryside around a city where building is severely restricted, preventing urban sprawl. London's green belt = 5,133 km² (Lisbon has the Tapada de Mafra buffer zone).
Transit-oriented development (TOD)	Planning dense, mixed-use neighbourhoods around public transport hubs (train stations, BRT stops) so that residents can live, work and shop without cars.
Car dependency	A situation where the design of an area makes car ownership essential — residents cannot access jobs, shops or services without driving. A key consequence of urban sprawl.
Megacity	A city with a population of over 10 million people. Lagos is a megacity (~15–16 million in city; ~22 million in metro area 2024). Tokyo, Delhi, São Paulo are also megacities.
Informal economy	Work and economic activity that is unregulated, unofficial and not taxed — common in squatter settlements where migrants work as street vendors, cycle-taxi drivers or waste pickers.

2. Causes of Rapid Urban Growth

Urbanisation in developing countries is driven by two main processes: **rural-to-urban migration** and **natural increase**. You must be able to distinguish between push and pull factors.

PUSH FACTORS (leaving the countryside)	PULL FACTORS (attracted to cities)
Economic: Few jobs; mechanisation of farming reduces labour demand; low and unreliable agricultural wages; debt cycles.	**Economic:** More jobs in factories, construction, retail and services; higher and more regular wages; informal economy opportunities.
Social: Poor access to schools, hospitals and universities; limited entertainment and social mobility.	**Social:** Better schools, hospitals, universities; wider social networks; greater freedom and opportunity.
Environmental: Natural disasters (floods, drought) destroy crops; land degradation reduces farm productivity; rural poverty cycles.	**Environmental:** Perceived better infrastructure; city seen as escape from harsh rural conditions.
Political: Conflict in rural areas can displace populations; lack of government investment in rural services.	**Political:** Governments often invest in cities (roads, industry, services) — creating a 'magnet effect'.

Natural increase also drives urban growth. Cities in developing countries have **high birth rates** (young migrant population; limited family planning) and **falling death rates** (better healthcare than rural areas) → population grows rapidly even if migration slows.

DTM Link: Most rapidly urbanising countries are in Stage 2–3 of the Demographic Transition Model — high birth rates, falling death rates → rapid natural increase fuels urban population growth alongside rural-to-urban migration.

3. Case Study 1 — Lagos, Nigeria & Makoko

~15–16m	~22m	>700k	~250k
Lagos city population (2024 estimate)	Lagos metro area (2024 estimate)	New residents arriving per year	Makoko population (estimates vary 100k–300k)

Left: Makoko stilt settlement. Right: Makoko Floating School (NLÉ Architects).

Why is Lagos growing so rapidly?

Lagos — Causes of Rapid Growth

- **Rural push factors:** Poverty and unemployment in rural Nigeria (especially Niger Delta region); Boko Haram conflict in the north displacing populations southward; drought and desertification in the Sahel.
- **Urban pull factors:** Lagos is Nigeria's commercial capital — home to banking, oil industry HQ, Nollywood film industry, ports; perceived opportunities even in the informal economy.
- **Natural increase:** Nigeria's birth rate ~35/1000; Lag in falling death rates means Lagos population grows by ~700,000+ per year from natural increase alone.
- **Historical growth:** Lagos grew from ~1.4 million (1970) to ~16 million (2024) — one of the fastest-growing cities in human history.

Makoko — Characteristics of a Squatter Settlement

CHARACTERISTIC	DETAIL FOR MAKOKO
Location	Built on stilts over Lagos Lagoon, northwest of Lagos Island. Occupies ~0.5 km² of water.
Housing quality	Wood, corrugated iron and salvaged materials. Houses are overcrowded (often 8–10 people per room). No building permits or planning approval.
Land tenure	Residents do not legally own the land/water they build on. Illegal occupation means constant threat of forced eviction by Lagos State Government.
Water supply	No clean running water. Residents buy from boats or draw from the polluted lagoon. Cost of bought water can be 10× higher than piped water.
Sanitation	No sewage system. Human waste goes directly into the lagoon — the same water children swim in and fish are caught from. Cholera and typhoid are endemic.
Electricity	Illegal connections to the national grid. Fires caused by faulty wiring are a major hazard. Many areas have no electricity at all.
Healthcare	No government health facilities. NGOs (e.g. MSF) provide limited clinics. Infant mortality is far above the Lagos average.
Education	The Makoko Floating School (built 2012, architect Kunlé Adeyemi) provided education for ~100 children until it collapsed in 2016. Enrolment among children is very low.

CHARACTERISTIC	DETAIL FOR MAKOKO
Economy	Most residents work in the informal economy: fishing, boat building, smoking fish for sale, or as day labourers in Lagos. Income is very low and irregular.
Security of tenure	In 2012 Lagos State gave 72 hours' notice before demolishing part of Makoko, displacing thousands. Residents live with permanent threat of eviction.

Left: Lagos informal market economy. Right: Lagos 'go-slow' traffic congestion.

Management Strategies for Squatter Settlements

STRATEGY	HOW IT WORKS	ADVANTAGE	DISADVANTAGE
Site and Service Schemes	Government allocates serviced plots with water/electricity/roads. Residents use loans to build own homes.	Cheap; builds community ownership; legal tenure given.	Can still be unaffordable; slow uptake if loans unavailable.
Self-Help Schemes	NGOs/gov't provide materials, training and micro-loans for residents to upgrade their own homes gradually.	Preserves community; cheap; residents gain skills.	Can be slow; quality varies; insecure land tenure remains.
Slum Clearance	Government demolishes the settlement and relocates residents to new social housing (as done in parts of Makoko 2012).	Quick; removes hazardous structures; frees land.	Breaks up communities; relocation often far from jobs; new housing may be unaffordable.
Legal Land Tenure	Granting residents legal ownership of their plots gives security to invest in improving their own homes.	Encourages investment; reduces threat of eviction.	Complex politically; land may be contested.

4. Urban Sprawl — Causes & Impacts

Urban sprawl affects cities in **both developed and developing countries**, though it is most studied in HICs like the USA. The syllabus requires you to explain its **environmental, social and economic impacts** and evaluate management responses.

Causes of Urban Sprawl

CAUSE	EXPLANATION
High land prices in city centres	Land is cheaper at the urban fringe → developers and buyers move outward.
Car ownership	Widespread car ownership makes long commutes feasible — suburbs expand along motorway corridors.
Desire for space and gardens	Families prefer detached homes with gardens over urban flats — demand drives low-density suburban development.
Weak planning controls	In the USA particularly, zoning laws allow single-use low-density suburbs far from city centres.
White flight / suburbanisation	In many US cities, middle-class families moved to suburbs from the 1950s onwards, pulling investment and retail with them.
Out-of-town retail and business parks	Once retail parks and offices locate on the fringe, more people follow — a self-reinforcing cycle of sprawl.

Impacts of Urban Sprawl

IMPACT TYPE	DETAIL	EXAMPLE
Environmental Land loss	Farmland, woodland and wildlife habitats are permanently lost to housing estates, roads and retail parks.	Atlanta lost ~260 km² of forest and farmland between 1973–1999 (USGS data).
Environmental Air pollution	Car-dependent sprawl generates huge vehicle emissions. Ozone and particulate pollution are severe health hazards.	Atlanta was listed as one of the USA's worst cities for ozone pollution; subject to Clean Air Act violations.
Environmental Flood risk	Impermeable surfaces (roads, roofs, car parks) prevent rainfall infiltrating — surface runoff overwhelms drainage systems.	Urban areas downstream of sprawl experience more frequent and severe flash flooding.
Social Car dependency	People without cars (elderly, poor, young) are isolated — unable to access jobs, schools or healthcare without transport.	MARTA (Atlanta's metro) covers only 2 of 29 metro counties — most residents have no viable alternative to driving.
Social Community fragmentation	Low-density sprawl reduces walkability — residents drive everywhere and rarely interact with neighbours, weakening community bonds.	US suburban design: cul-de-sacs, no pavements, no public spaces.
Economic Traffic congestion	Everyone commuting by car creates gridlock — wasting time and fuel, reducing economic productivity.	Lisbon: ~95 hours per driver per year lost in congestion (TomTom 2023). Atlanta: I-285 and I-85 among USA's most congested.
Economic Infrastructure costs	Sprawl requires expensive road, pipe and cable networks spread over huge areas — costly per household to build and maintain.	Studies show sprawl costs US cities 10× more per household in infrastructure than compact development.

IMPACT TYPE	DETAIL	EXAMPLE
Economic Urban decay	As investment and population leave the city centre for suburbs, inner city areas decline — shops close, buildings deteriorate.	Atlanta's inner city experienced significant deindustrialisation and poverty as suburbs expanded from 1960s–1980s.

5. Case Study 2 — Atlanta, USA & Lisbon, Portugal

~6.2m	28,000 km²	~95hrs	2 of 29
Atlanta metro area population (2024)	Metro area land coverage (one of world's largest)	Lisbon: hours lost to congestion per year (TomTom)	Atlanta metro counties served by MARTA rail

Left: Atlanta CBD surrounded by low-density sprawl. Centre: Spaghetti Junction (I-85/I-285). Right: Typical suburban cul-de-sac housing, Gwinnett County.

Atlanta — The 'Sprawl Capital'

Atlanta Key Facts

• **Scale:** Atlanta's metro area covers ~28,000 km² — comparable to Belgium — yet houses only ~6 million people. One of the lowest-density metro areas in the USA.
• **Car dependency:** MARTA rail serves only Fulton and DeKalb counties out of 29 metro counties. ~80% of commuters drive alone to work. Atlanta residents drive among the highest annual distances in the USA.
• **Air quality:** Ranked among the USA's top 10 worst cities for ozone pollution. Subject to repeated EPA Clean Air Act violations. Vehicle emissions are the primary cause.
• **Growth history:** Atlanta boomed post-WWII, particularly after designation as a major airline hub (Hartsfield-Jackson airport, world's busiest). Population tripled between 1960–2000 with almost all growth in suburbs.
• **Social inequality:** Sprawl correlates with racial and economic segregation. Poor, predominantly Black communities concentrated in inner suburbs without MARTA access; wealthy white suburbs resisted MARTA expansion to maintain separation.

Left: MARTA — Atlanta's limited rail network. Right: Lisbon rush-hour congestion (~95 hrs/yr per driver).

Lisbon — Urban Sprawl in a European Context

Lisbon's Área Metropolitana de Lisboa (AML) has experienced significant sprawl since the 1970s. The city's population has decentralised — Lisbon city itself lost population (from ~830,000 in 1980 to ~545,000 today) while outer municipalities like Sintra (>430,000), Cascais, and Setúbal have grown rapidly.

INDICATOR	LISBON (AML)	ATLANTA (Metro)
Metro population	~2.87 million (2023)	~6.2 million (2024)

INDICATOR	LISBON (AML)	ATLANTA (Metro)
City centre pop. trend	Declining (suburbanisation)	Recovering slowly post-2010
Congestion (hrs/yr)	~95 hours (TomTom 2023)	~60+ hours (Atlanta I-285 corridor)
Public transport	Metro + buses; 25 de Abril bridge and A5 motorway bottlenecks	MARTA (limited); I-285 ring road; heavy car dependency
Sprawl control measures	EU planning directives; PDM zoning; greenfield restrictions (RAN/REN)	Urban Growth Boundary proposals; TOD around MARTA stations

6. Managing Urban Sprawl — Strategies & Evaluation

STRATEGY	HOW IT WORKS	ADVANTAGE	DISADVANTAGE / LIMITATION
Green Belt	Legally protected countryside around the city where building is strictly restricted (e.g. London's 5,133 km² Green Belt since 1947).	Stops outward sprawl; preserves farmland and habitats; maintains city identity.	Increases house prices (restricts supply); 'leapfrog' sprawl jumps beyond the belt; developers lobby to reduce it.
Brownfield Development	Redeveloping previously used urban land (old factories, docklands) for new housing and commercial uses.	No greenfield lost; uses existing infrastructure; regenerates derelict areas.	More expensive to develop (decontamination costs); less attractive than new-build suburbs; limited supply.
Transit-Oriented Development (TOD)	Building dense, mixed-use development around rail stations / BRT stops so residents can live without cars.	Reduces car dependency; makes public transport viable; creates walkable, liveable communities.	Requires significant public transport investment first; expensive land near stations; risk of gentrification.
Urban Growth Boundaries (UGB)	A legal line beyond which urban development is not permitted (e.g. Portland, Oregon UGB since 1979).	Concentrates development; prevents sprawl; protects rural land.	Must be regularly reviewed; political pressure to expand boundary; can push up land prices within it.
Improving Public Transport	Investing in fast, cheap metro/BRT systems to make car alternatives viable (e.g. MARTA expansion proposals in Atlanta).	Reduces car dependency; lowers emissions; benefits lower-income residents.	Very expensive; political opposition from car-dependent communities; slow to build.
Congestion Charging	Charging drivers to enter city centres at peak times — discourages car use; revenue funds public transport.	Reduces city-centre traffic; raises revenue; London scheme cut traffic by 30% initially.	Regressive — hits lower-income commuters hardest; political unpopularity ('war on drivers').

7. Vocabulary Checklist & Syllabus Tracker

TERM	CAN DEFINE?	CAN USE IN CONTEXT?	NOTES
Urbanisation	■ Yes ■ No	■ Yes ■ No	
Rural-to-urban migration	■ Yes ■ No	■ Yes ■ No	
Natural increase	■ Yes ■ No	■ Yes ■ No	
Push factor	■ Yes ■ No	■ Yes ■ No	
Pull factor	■ Yes ■ No	■ Yes ■ No	
Squatter settlement	■ Yes ■ No	■ Yes ■ No	
Shanty town / favela	■ Yes ■ No	■ Yes ■ No

Cambridge Syllabus Objective Checklist — tick when confident:

SYLLABUS OBJECTIVE	CONFIDENT? ■ Yes ■ No
1. Identify and explain the reasons for rapid urban growth (push/pull factors + natural increase)	■ Yes ■ Partly ■ No
2. Describe the characteristics of a squatter settlement (housing, water, sanitation, tenure, economy)	■ Yes ■ Partly ■ No
3. Name and locate your case study squatter settlement (Makoko, Lagos, Nigeria)	■ Yes ■ Partly ■ No
4. Explain at least THREE management strategies for squatter settlements with advantages/disadvantages	■ Yes ■ Partly ■ No
5. Define urban sprawl and explain its causes (car ownership, land prices, planning controls, suburbanisation)	■ Yes ■ Partly ■ No
6. Describe the environmental impacts of urban sprawl (habitat loss, air pollution, flooding)	■ Yes ■ Partly ■ No
7. Describe the social impacts of urban sprawl (car dependency, community fragmentation, inequality)	■ Yes ■ Partly ■ No

SYLLABUS OBJECTIVE	CONFIDENT? ■ Yes ■ No
8. Describe the economic impacts of urban sprawl (congestion, infrastructure cost, urban decay)	■ Yes ■ Partly ■ No
9. Name and locate your developed country case study (Atlanta, USA) with specific facts and statistics	■ Yes ■ Partly ■ No
10. Explain how Lisbon's AML demonstrates urban sprawl impacts in a European context (95 hrs/yr)	■ Yes ■ Partly ■ No
11. Evaluate at least FOUR management strategies for urban sprawl (green belt, brownfield, TOD, UGB)	■ Yes ■ Partly ■ No
12. Write a 7-mark extended answer using PEEL with data and balanced evaluation	■ Yes ■ Partly ■ No

8. Exam Practice Questions

Exam Alert: Topic 1.7 is a popular source of 7-mark questions. Expect case study questions on either Lagos/Makoko OR Atlanta. Practise using specific data in every answer.

[1 mark] What is meant by the term 'urban sprawl'?

MARK SCHEME — Q1

✓ The unplanned, low-density outward expansion of a city into the surrounding countryside [1]
✓ Accept: 'growth of a city into the rural-urban fringe' or 'spread of a city over farmland/green space'

[2 marks] Describe two characteristics of a squatter settlement.

MARK SCHEME — Q2

✓ One mark each for any two correctly described characteristics [1+1]:
✓ Poor housing quality (corrugated iron, salvaged materials) / Overcrowded (many people per room)
✓ No/limited clean water supply / No sanitation / sewage
✓ No legal land tenure (residents do not own the land) / Illegal occupation
✓ No/illegal electricity connections / Lack of services (healthcare, education)
✓ Located on marginal/hazardous land (steep slopes, flood plains, over water)

[4 marks] Explain why cities in developing countries experience rapid urban growth.

MARK SCHEME — Q4

✓ Level 2 (3–4): Two or more explained reasons; some linkage between cause and effect
✓ Level 1 (1–2): Identifies reasons with little explanation
✓ Credit: rural push factors (poverty, drought, conflict, mechanisation of farming)
✓ Credit: urban pull factors (employment, services, education, higher wages)
✓ Credit: natural increase (high birth rate, falling death rate in cities)
✓ Credit: reference to specific country/city context (e.g. Lagos, Nigeria)

[4 marks] For a named squatter settlement you have studied, describe the problems faced by residents.

MARK SCHEME — Q4 (Case Study)

✓ Must name the settlement: Makoko, Lagos, Nigeria [0 marks without name]
✓ Level 2 (3–4): Two or more described problems with specific detail
✓ Level 1 (1–2): One described problem or general points without named context
✓ Credit: No clean water (buy from boats; costs 10× piped rate); No sanitation (waste into lagoon); Fire risk (illegal wiring); Eviction threat (Lagos State 2012); No healthcare; Low school enrolment

[7 marks] For a city you have studied in a developed country, evaluate the strategies used to manage the effects of urban sprawl. [Atlanta / Lisbon context]

PEEL ANSWER PLANNER (7-mark question)

Point — State your argument clearly.
Evidence — Specific data / named place / statistic.
Explain — Why does this happen? What are the consequences?
Link — Connect back to the question and consider the other side.

MARK SCHEME — Q5 — 7-mark Extended Answer

✓ Level 4 (6–7): Balanced evaluation; named city; specific facts; conclusion; PEEL structure
✓ Level 3 (4–5): Two or more strategies described/explained with some evaluation; some data
✓ Level 2 (2–3): Strategies identified with basic explanation; little evaluation
✓ Level 1 (1): Strategy named only; no explanation or evaluation
✓ Credit: Atlanta — MARTA expansion (pro: reduces car dependency; con: only 2/29 counties covered)
✓ Credit: Green belt / UGB — Portland Oregon example or Lisbon's RAN/REN green zones
✓ Credit: Brownfield development (pro: no greenfield lost; con: contamination costs)
✓ Credit: TOD — dense development around stations (pro: walkable; con: expensive/gentrification)
✓ Credit: Congestion charging (London example; pro: 30% traffic reduction; con: regressive)
✓ Must refer to: named city + specific statistic (Atlanta pop/area OR Lisbon 95 hrs congestion)

9. Summary Revision Card

Cut out and carry — learn all the data targets in bold.

THEME 1.7 URBANISATION — MUST-KNOW DATA

Lagos, Nigeria: ~15–16 million city; ~22 million metro; >700,000 new residents/year; fastest-growing African megacity
Makoko: ~250,000 residents; built on stilts over Lagos Lagoon; no clean water/sanitation; eviction threat; 2012 demolition; Floating School NLÉ 2012
Atlanta, USA: ~6.2 million metro; 28,000 km² land area; MARTA covers 2 of 29 counties; top 10 worst US ozone pollution city; lost ~260 km² forest/farmland 1973–1999
Lisbon, Portugal: ~95 hrs/year per driver lost to congestion (TomTom 2023); AML population ~2.87 million; Lisbon city lost population (suburbanisation)

KEY DEFINITIONS TO MEMORISE:
Urbanisation = increase in PROPORTION of people in urban areas
Squatter settlement = illegal housing on land residents do not own; lacks services
Urban sprawl = unplanned, low-density outward expansion of a city
Greenfield = never built on before | Brownfield = previously developed
TOD = dense development around transport hubs

MANAGEMENT STRATEGIES TO EVALUATE:
Site & service | Self-help | Slum clearance | Legal tenure → squatter settlements
Green belt | Brownfield dev | TOD | UGB | Public transport | Congestion charge → sprawl

10. Photo Wishlist — Images Needed for This Pack

The following photos are needed to replace the blue placeholder boxes throughout this pack. Please source from Wikimedia Commons, Unsplash (free licence) or your own photos. Do not use watermarked or Google Image Search results. Each image should be at landscape orientation, ideally 1200px+ wide.
